Simulation Strategies

This two-hour virtual *Simulation Strategies* training, designed for novice simulationists, reviews the entire simulation process, including learning objective authoring, scenario design elements, prebriefing, facilitation, and debriefing. The session is instructor-led and participants are welcome to ask questions via the platform's chat feature.

This training does not focus on any specific simulator models or control systems.

Upon full participation and completion of this virtual training, participants will be able to:

- Recall strategies for designing simulations
- Provide the benefits & desired outcomes associated with the use of self-designed simulations
- Define strategies for facilitation & evaluation of the simulation session

2-Hour Live Online Training Agenda:

Designing and developing a simulation	20 minutes
Identifying learners	15 minutes
Identifying and authoring learning objectives	15 minutes
Outlining the scenario	20 minutes
Scenario facilitation	20 minutes
Debriefing concepts and best practices	20 minutes
Closing thoughts and Q&A	10 minutes

Educational Representative Responsibility:

Your Laerdal Educator has multiple responsibilities during the virtual training:

- Help you understand Laerdal resources.
- Conduct an interactive agenda to optimize your understanding of the simulation process and facilitate the development of your proficiency.
- Illustrate techniques to help improve your simulations.
