

## New Manikin Features in SimMan

Laerdal has upgraded SimMan to make your simulation even more realistic.

helping save lives

### Pedal Pulses in SimMan

SimMan has now got palpable bilateral Dorsalis Pedis and Posterior Tibialis pulses for assessment of circulatory conditions and traumatic injuries.

These added features will also be implemented into SimMan Nursing Wound Module Set and SimMan Trauma Module Set.

*Please contact your Laerdal sales representative to discuss upgrade options*

**New module set with pedal pulses:**

211-20050 SimMan Nursing Wound Module Set  
 211-25050 SimMan Trauma Modules

### SimMan Head

SimMan's head and airway anatomy have been updated to allow for realistic training in the various airway management procedures including Bag-Valve-Mask, supraglottic airway adjuncts and endotracheal intubation.

The learner can also obtain additional vital signs information through assessment of the pupils. The pupil size can be varied between normal, constricted and dilated.

All these new features in the head can be easily retrofitted on your current SimMan.
